Website Video Walkthrough Guidelines

Objective

The purpose of the video walkthrough is to demonstrate your understanding of **HTML and CSS** by explaining your website's structure, styling, and design choices. This will also help verify that you actively developed the project yourself.

Video Requirements

- **Duration**: **12-15 minutes**
- **Format**: Screen recording with voice narration.
- **File Type**: MP4, AVI, or MOV
- **Resolution**: Minimum 720p (**Recommended:** 1080p)
- **Submission**: Upload a link to the video on YouTube/SharePoint along with your final project files.

Content Guidelines

Your video should be structured into the following sections:

1. Introduction (2-3 minutes)

- State your **name(s)** and your **website topic**.
- Describe the **purpose** of your website and its intended **audience**.
- Provide an overview of your website's **number of pages**, key features, and how they are connected.

2. HTML Structure (4-5 minutes)

- Open your **HTML files** in a code editor (e.g., VS Code, Sublime Text, Notepad++).
- Walk through your **HTML structure**, explaining:
    - Use of **semantic HTML elements** (<header>, <nav>, <section>, <footer>, etc.).
    - How you structured the **navigation menu** and used internal/external links.
    - Explanation of **forms**, including input types and validation.
    - How you incorporated **images, tables, videos**, or other media.
    - Any additional elements that enhance **usability and accessibility**.

3. CSS Styling (4-5 minutes)

- Open your **CSS file(s)** and walk through key styling choices:
    - **Typography** (font choices, text styling, colours).
    - **Box model usage** (margins, padding, borders, widths, and heights).
    - **Navigation menu styling** (hover effects, pseudo-classes like :hover, :focus).
    - **Form styling** (inputs, buttons, validation messages).
    - Use of **flexbox or grid** for layout structuring.
    - Any **animations or transitions** you implemented.
- Explain how you ensured **responsive design**, including:
    - **Media queries** for different screen sizes.
    - Adjustments made for **mobile-friendliness** (e.g., flexible layouts, hiding/showing elements).

4. Website Functionality & Live Demonstration (3-4 minutes)

- Open your website in a **browser** and:
    - Show how users can **navigate between pages**.
    - Demonstrate **interactive elements**, such as hover effects or forms.
    - Resize the browser window to showcase **responsiveness** across different screen sizes.
- Mention any **additional features** implemented (e.g., animations, dark mode toggle, smooth scrolling).

5. Conclusion (1-2 minutes)

- Summarise your project experience:
    - What did you **learn** while building this website?
    - What challenges did you face, and how did you **overcome** them?
    - If given more time, what **improvements** would you make?

Technical Requirements & Tools

- Use **screen recording software**.
- Ensure your **voice is clear and audible** throughout the recording.
- Avoid excessive background noise.
